Personal Statement

Cutting-edge technology is nowadays as central to the sport of Athletics as it is to any business. As a true sports fan, Immaculate understands that the game has evolved beyond the field, but believes that the viewing experience and performance optimization still have gaps that current technology has yet to fill. She wonders how technology can enhance the viewing experience, encouraging fan engagement, assisting teams and players to increase performance.

Projects

CoopConnect Project

CoopConnect is a digital platform that helps Rwandan farmers learn about agriculture. It offers training sessions and rewards farmers with points for joining, which they can use to pay for future training, making it easier for them to participate and improve their farming skills.

CraftCrest Project

CraftCrest connects Kenyan artisans with buyers, letting artisans show their products and take custom orders. The app has a clear signup process and holds payments until buyers confirm they received their items, creating a supportive environment for local craftsmanship.

Skills/Experience

Collaborated with a team to develop an end-to-end product that addresses the need for accessible training for farmers in a Rwandan cooperative.

- Conducted desk research and primary data collection to identify the key challenges faced by cooperative farmers in Rwanda.
- Created brand assets for farmers, including wireframes, brand guidelines, logo, and user interface design in Figma.
- Developed a responsive informational website using HTML5, CSS, and JavaScript.
- Designed scalable PostgreSQL data models to illustrate the relationships among diverse attributes.
- Built APIs with Django REST Framework to support efficient data management.
- Integrated internal and external APIs using React.js to ensure accurate data flow.
- Authored, implemented, and documented unit and integration tests to validate product quality.
- Developed a mobile application with Kotlin Compose (Jetpack) to connect farmers with extension workers for training sessions.

Education

AkiraChix

CodeHive: Diploma in Information Technology

February 2025 - November 2025
